

The Mechanical Vision Corporation

The Technician Works.

The Paperwork **Writes Itself.**

Jake Salomon

Founder

-  **Delivers Industrial AI.** Product lead at Circuit, which raised \$10s of millions to sell AI to manufacturers. >\$10M pipeline in 6 months.
-  **Early startup operator.** Employee #5 at Ika (formerly dWallet Labs), which reached a \$250M valuation.
-  **Corporate strategy.** Accenture Strategy for Fortune 500 clients, including global manufacturers.

UNIVERSITY

America is scaling manufacturing.
MVC scales maintenance.

40%

of an aerospace technician's day disappears into paperwork,
not turning wrenches.

MVC customer discovery, supported by [McKinsey](#) and [FAA research](#)

40%

of a tech's day
lost to paperwork

\$48K

in labor spend per
technician per year.

$40\% \times 2,000 \text{ hours/year} \times \$60/\text{hour loaded labor}$

40%

of a tech's day
lost to paperwork

\$48K

labor spend per
technician per year

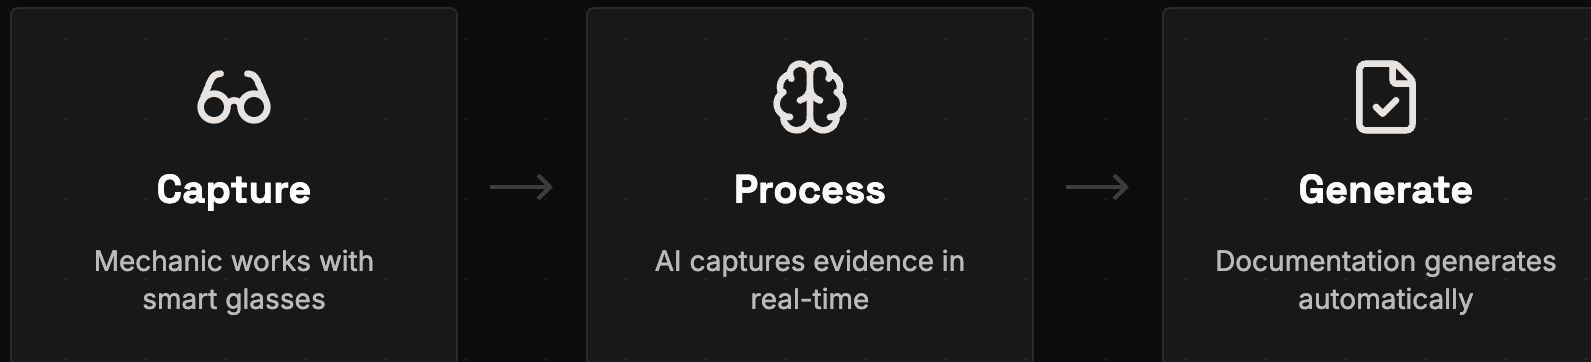

\$2M

per 40-person
shop per year

$40 \text{ people} \times \$48\text{K/person/year} = \sim\2M/year

What if the documentation wrote
itself while the technician works?

How It Works

2 hours of paperwork → 10 minutes

The Market is Ready

Two design partners are excited to deploy in the field

“I think this could be actually gold. I really do.”

Maintenance Operations Executive

“We don’t have to do the three hour job again to try and find or redo everything. That is many hours, that’s helicopter downtime.”

Flight Operations Executive

“All in all, I think something like this... could be extremely beneficial.”

Director of Engineering

“I think there can be fantastic use cases here, fantastic improvements.”

IT Leader

“That’s like the best traceability you can think of right there... I can see that definitely helping out with the quality side.”

Manufacturing Leader

Aerospace is the Wedge.

Documentation-Heavy Technical Work
is the Market.

Total Addressable Market

Global documentation automation for **high-value technical labor** across maintenance, inspection, cleanrooms, and technical operations

Serviceable Addressable Market

Global aerospace documentation automation opportunity: **civilian + defense** aviation maintenance, repair, and overhaul

Serviceable Obtainable Market

American civilian aerospace maintenance worker base of **192,000 people**

Wedge

25k U.S. Aviation Inspectors

~\$150M at \$500/seat/month

\$85B

Technical work-capture TAM

\$5B

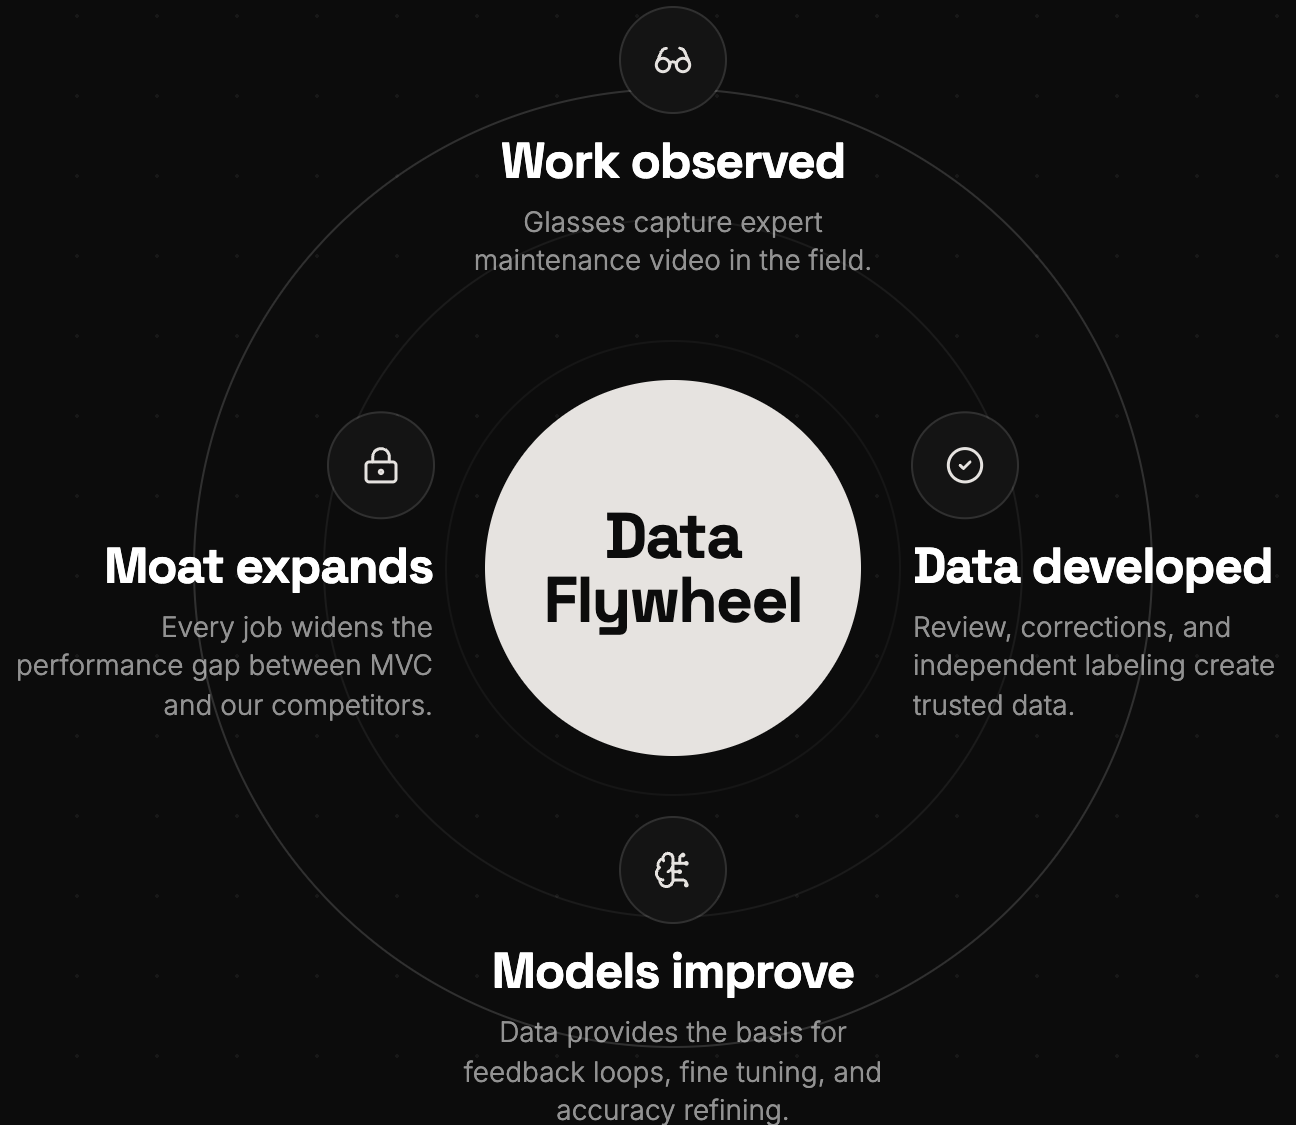

Aerospace + defense aviation
SAM

\$1B

American civilian
aerospace SOM

The Moat Compounds

Every reviewed job creates a training signal MVC learns from.

ROBOTICS OPPORTUNITY

MVC Automates Maintenance

\$1T+

annual skilled maintenance labor spend

MVC App Layer

fine-tuned with proprietary field data

Model Layer

VLA models from NVIDIA, OpenAI, etc.

Hardware Layer

Figure, Unitree, Tesla, etc.

Hardware and models commoditize. The data-rich app layer is where value accrues, and it's the only layer we need to own.

THE ASK

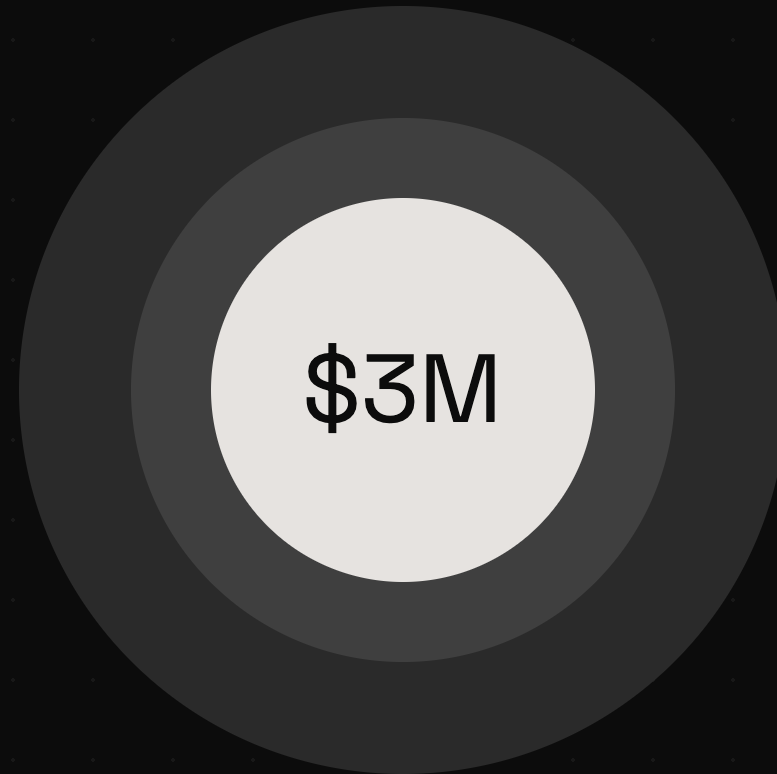

Pre-Seed Round

USE OF FUNDS

- 50% Technical team**
Founding engineers, AI team, aviation data ops
- 35% Deployments + data capture**
Glasses fleet, inference, onsite implementation
- 15% Compliance, legal, infra**
SOC 2/security, legal, insurance, AWS

MILESTONES

- ✓ 3 paid production contracts
- ✓ \$1M+ live ARR
- ✓ 25,000+ labeled maintenance hours feeding the production data flywheel

Pre-Seed Round

Turns pilots into paid production deployments.

The Mechanical Vision Corporation

The technician works. The paperwork writes itself.
